We should describe a certain property which all the elements  $x$ , in a set, have in common so that we can know whether a particular thing belongs to the set. We relate a member and a set using the symbol  $\in$ . If an object  $x$  is an element of set  $A$ , we write  $x \in A$ . If an object  $z$  is not an element of set  $A$ , we write  $z \notin A$ .

Objects share attributes. Thus, by using predicted attributes as features, one can get a more compact and more discriminative feature space. Learning both semantic and discriminative attributes open doors to some new visual functions. We can not only recognize objects using predicted attributes as features, but also describe unfamiliar objects.
