IV Fluids When administering IV fluids, the type and amount of fluid may influence patient outcomes. Make sure to understand the differences between fluid products and their effects. Crystalloids Crystalloid solutions contain small molecules that flow easily across semipermeable membranes, from the bloodstream into the cells and body tissues.

## **IV Fluids - NursingCenter.com**

Intravenous therapy (IV) is therapy that delivers fluids directly into a vein. The intravenous route of administration can be used both for injections, using a syringe at higher pressures; as well as for infusions, typically using only the pressure supplied by gravity. Intravenous infusions are commonly referred to as drips. The intravenous route is the fastest way to deliver medications and ...

## **Intravenous therapy - Wikipedia**

Capillary refill, which is observed by squeezing a fingertip and then watching the red color return, is a reflection of perfusion. If capillary refill is decreased, then perfusion to that extremity is decreased. Treatment: In the case of intraarterial injection, it is the intravenous drugs which pose severe problems, rather than the I.V. solution.
