A piston ring is a metallic split ring that is attached to the outer diameter of a piston in an internal combustion engine or steam engine.. The main functions of piston rings in engines are: Sealing the combustion chamber so that there is minimal loss of gases to the crank case.; Improving heat transfer from the piston to the cylinder wall.; Maintaining the proper quantity of the oil between ...

An internal combustion engine (ICE) is a heat engine in which the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

The industrial applications of cryogenic technologies can be summarised in three categories: (1) process cooling; (2) separation and distillation of gas mixtures; and (3) liquefaction for transportation and storage .The cryogenic industry has experienced continuous growth in the last decades, which was mostly driven by the worldwide development of liquefied natural gas (LNG) projects.
