Structured Analysis and Structured Design (SA/SD) is diagrammatic notation which is design to help people understand the system. The basic goal of SA/SD is to improve quality and reduce the risk of System failure. It establishes concrete management specification and documentation. It focuses on solidity, pliability and maintainability of system.

Structured analysis and design technique (SADT) is a systems engineering and software engineering methodology for describing systems as a hierarchy of functions. SADT is a structured analysis modelling language, which uses two types of diagrams: activity models and data models.It was developed in the late 1960s by Douglas T. Ross, and was formalized and published as IDEF0 in 1981.

Structured analysis and design technique - Wikipedia

The Structured Systems Analysis and Design Method, or SSADM, is an approach to designing and analyzing information systems. Developed in Britain in 1980, this method uses logical data modeling, entity event modeling and data flow modeling in a six-step process to determine how a system must be created or updated.
