The Hot Zone Rainshadow 4
A Mediterranean climate / ˌ m ɛ d ɪ t ə ˈ r eɪ n i ə n / or dry summer climate is characterized by dry summers and mild, wet winters. The climate receives its name from the Mediterranean Basin, where this climate type is most common.Mediterranean climate zones are typically located along the western sides of continents, between roughly 30 and 45 degrees north and south of the equator.

Factors affecting climate - SlideShare
A desert is a barren area of landscape where little precipitation occurs and, consequently, living conditions are hostile for plant and animal life. The lack of vegetation exposes the unprotected surface of the ground to the processes of denudation.About one-third of the land surface of the world is arid or semi-arid.This includes much of the polar regions, where little precipitation occurs ...

Jayne Castle - Fantastic Fiction
The presence of mountains upwind of these climates can further reduce moisture availability because of the rainshadow effect. Major expanses of mid-latitude deserts can be found east of the Caspian Sea, north of the Himalayas, in western United States, and east of the Andes in a narrow region in southern South America.

7(v) Climate Classification and Climatic Regions of the World
The ground is super hot because the sun's rays beat down on it directly overhead. Not a lot of atmosphere to protect it from radiant energy. By the way, approximately 1 in. (2.5 cm) of rain falls in dry deserts per year. The average annual temperature of these miles of hot sand is 64° F (18° C).

Last but not least and in my case is the final straw- everytime they switch the "air conditioning" to heat or vice versa the building (4) loses all water or all hot water. I should've known 1 week after moving in we were without water for a week. More recently we were without hot water for OVER 20 days.
