G4 U4 L1 Lesson 1 Where did the Whales Come From?

A Brief Review of the “Whale Transitional” Series Supposed “early” whales have little in common with hippos or living whales. In the secular worldview, the currently accepted whale evolution model is that the hippopotamus is the closest living relatives of whales.

Whale Genetics and Evolution | Answers in Genesis

Whales are thought by evolutionists to have evolved from land mammals. Many museums present a nice, orderly succession of fossils that supposedly show this transition from land to water. However there are many problems with the idea that a land animal could turn into a water mammal. Whales do not have the pelvis that land mammals do.
